Concept and Vocabulary Check:

1. The negative exponent rule states that $b^{-n} = \underline{\hspace{2cm}}$, $b \neq 0$.

4. Negative exponents in denominators can be evaluated using $\frac{1}{b^{-n}} = \underline{\hspace{2cm}}$, $b \neq 0$.

Applications:

139. In 2009, the United States government spent more than it had collected in taxes, resulting in a budget deficit of \$1.35 trillion.
- Express 1.35 trillion in scientific notation.
 - Express the 2009 U.S. population, 307 million, in scientific notation.
 - Use your scientific notation answers from parts (a) and (b) to answer the following question: If the 2009 budget deficit was evenly divided among every individual in the United States, how much would each citizen have to pay? Express the answer in scientific and decimal notations.
141. If there are approximately 3.2×10^7 seconds in a year, approximately how many years is 1.35 trillion seconds?
143. Use the formula $d = rt$, distance equals rate times time, and the fact that light travels at the rate of 1.86×10^5 miles per second to answer the following question: If the moon is approximately 2.325×10^5 miles from Earth, how many seconds does it take moonlight to reach Earth?
