16. Forensic scientists use the length of certain bones to calculate the height of a person. When the femur (*f*), the bone from the knee to the hip socket is used, the following formula applies for men: $h = 69.09 + 2.24f$, where *h* is the height and *f* is the length of the femur. Find the height of a man with a femur measuring 59 centimeters.

16. _____

17. There is a formula that gives a correspondence between women's shoe sizes in the United States and those in Italy. The formula is $S = 2(x + 12)$, where *S* is the size in Italy and *x* is the size in the United States. What would be the US size for an Italian size of 32?

17. _____

18. In one state, speeding fines are determined by the formula $F = 6(x - 60) + 75$, where *F* is the cost, in dollars, of the fine if a person is caught driving *x* miles per hour. If the fine comes to $249, how fast was the person driving?

18. _____

19. When you buy an item on which sales tax is charged, the total cost is calculated by the formula $T = P + \frac{S}{100}P$, where *T* is the total cost, *P* is the item's price, and *S* is the sales tax rate (as a percent). If you pay $20.045 for an item priced at $19, what is the tax rate?

19. _____

20. To convert a Fahrenheit temperature to Celsius, one formula to use is $F = \frac{9}{5}C + 32$ where *F* is the Fahrenheit temperature (in degrees) and *C* is the Celsius temperature. What is the Celsius temperature (to the nearest degree) when Fahrenheit temperature is 86°?
